

# Business Proposal: AGI Workforce Product Acquisition

Submitted to: Anthropic Leadership  
From: Siddhartha Nagula, Founder & CEO

Date: January 2026  
Contact: ceo@agiagentautomation.com

## Opportunity

I built a cross-platform AI agent desktop application that solves the same problem as Claude Cowork—before Cowork launched. Anthropic can acquire this product to accelerate cross-platform expansion and gain proprietary agent orchestration technology.

**This proposal covers:** Full product IP and codebase transfer, integration consulting to ensure successful adoption, and ongoing advisory availability.

## The Product

**AGI Workforce** is a production-ready desktop application enabling AI agents to autonomously work with files, execute code, automate browsers, and control desktop interfaces.

| Metric         | Value     | Metric           | Value   |
|----------------|-----------|------------------|---------|
| Lines of Code  | 465,000+  | Rust Modules     | 67      |
| GitHub Commits | 725+      | Test Files       | 600+    |
| Development    | 14 months | React Components | 68 dirs |

| Platform | AGI Workforce | Claude Cowork |
|----------|---------------|---------------|
| macOS    | ✓             | ✓             |
| Windows  | ✓             | ✗             |
| Linux    | ✓             | ✗             |

### Capabilities Included:

- **Agent System:** Multi-agent orchestration, plan-act-observe loops, outcome tracking, RAG
- **Automation:** Browser control (CDP + Playwright), desktop automation, vision-based actions
- **LLM Integration:** Multi-provider router (Claude, GPT, Gemini, Ollama), streaming, caching
- **Infrastructure:** Tauri 2.9 (Rust + React), SQLite, WebSocket, CI/CD multi-platform builds

## Strategic Value to Anthropic

- **Cross-Platform Expansion:** Windows and Linux represent ~70% of the desktop market. This codebase provides working, tested cross-platform support—months of development Anthropic can skip.
- **Advanced Agent Capabilities:** Multi-agent coordination, outcome-driven learning, process templates, sandboxed execution with resource limits.
- **Computer Use Technology:** Full desktop automation stack with Windows UIA and macOS Accessibility API integrations.
- **Architectural Insights:** 14 months of learnings about agent safety, UX trust patterns, multi-LLM orchestration, and performance optimization.

## Proposed Transaction

### What Anthropic Receives:

- **Complete Codebase:** All source code (Rust, TypeScript, Next.js), full git history, CI/CD pipelines, test suites
- **Intellectual Property:** All patents, trademarks, trade secrets, architecture designs, proprietary algorithms
- **Integration Consulting:** Dedicated support during transfer, architecture walkthroughs, knowledge transfer sessions

### Engagement Structure:

- **Phase 1 - Due Diligence** (1-2 weeks): Code review, architecture deep-dive, technical Q&A, security assessment
- **Phase 2 - Transaction** (Upon agreement): IP transfer, codebase handover, infrastructure access
- **Phase 3 - Integration Consulting** (3-6 months): Engineer onboarding, integration support, cross-platform deployment advisory

## About Me

**Siddhartha Nagula** — Founder & CEO, AGI Automation LLC

- **Education:** MS Computer Science, University of Texas at Arlington (2025)
- **Certifications:** Google Cloud Engineer, NVIDIA LLM Applications (RAG, LangChain)
- **Track Record:** Built AGI Workforce solo (14 months); Co-founded \$1M+ revenue infrastructure company
- **Expertise:** Rust, TypeScript, LLM integration, agent orchestration, cross-platform desktop development

## Next Steps

I welcome a conversation to explore this opportunity:

1. **Introductory Call** — Discuss strategic fit and mutual interests
2. **Technical Review** — Code walkthrough and architecture deep-dive (under NDA)
3. **Terms Discussion** — Align on transaction structure and consulting engagement
