

I Built Claude Cowork—Independently. I Want to Join Anthropic.

Siddhartha Nagula | ceo@agiagentautomation.com | Austin, TX | January 2026

The Short Version

Before Anthropic launched Claude Cowork on January 12, 2026, I spent a year building a production AI agent platform that solves the same problem: enabling AI to autonomously work with files, execute code, and automate workflows.

I shipped **725+ commits**, wrote **465,000+ lines of code**, and built a working product—as a solo founder. This convergence validates my product instincts and technical ability. I want to bring that experience to Anthropic.

What I Built

Capability	My Platform	Claude Cowork
File operations & code execution	✓	✓
Document creation (DOCX, PDF, XLSX)	✓	✓
Agentic task planning	✓	✓
Multi-LLM support	✓	Claude only
Cross-platform (Win/Mac/Linux)	✓	macOS only
Browser automation	✓	Via extension

Tech stack: Rust, TypeScript, React, Tauri, real-time streaming, multi-agent orchestration.

Why Anthropic

I independently arrived at the same product vision your team shipped. That alignment matters. I understand the technical challenges—agent safety, permission models, user trust, execution sandboxing—because I solved them myself.

I want to build AI agents at the company defining how they should work.

My Background

- **MS Computer Science**, UT Arlington (2025)
- **Google Cloud Certified**, NVIDIA LLM Applications Certified
- **Founder & CEO**, AGI Automation LLC—built and shipped a production SaaS platform
- **250+ LeetCode Hard problems**—strong CS fundamentals

Next Step

I am ready to interview for engineering or product roles on the Claude Cowork, Claude Code, or agent systems teams.

Let's talk: ceo@agiagentautomation.com

Platform demo available under NDA upon request.
