

Business Proposal: AGI Workforce Product Acquisition

Submitted to: Anthropic Leadership

From: Siddhartha Nagula, Founder & CEO

Date: January 2026

Contact: ceo@agiagentautomation.com

Opportunity

I built a cross-platform AI agent desktop application that solves the same problem as Claude Cowork—before Cowork launched. Anthropic can acquire this product to accelerate cross-platform expansion and gain proprietary agent orchestration technology.

This proposal covers full product IP and codebase transfer, integration consulting, and ongoing advisory availability.

The Product

AGI Workforce is a production-ready desktop application enabling AI agents to autonomously work with files, execute code, automate browsers, and control desktop interfaces.

Metric	Value	Metric	Value
Lines of Code	465,729+	Rust Modules	67
GitHub Commits	725+	Test Files	600+
Development	14 months	React Components	68 dirs
Zustand Stores	39	Source Files	1,614

Platform	AGI Workforce	Claude Cowork
macOS	Yes	Yes
Windows	Yes	No
Linux	Yes	No

Capabilities Included:

- Agent System: Swarm orchestration (100 concurrent sub-agents), plan-act-observe loops, outcome tracking, RAG
- Automation: Browser control (CDP + Playwright), desktop automation, vision-based actions, OCR
- LLM Integration: Multi-provider router (Claude, GPT-4, Gemini, Ollama), streaming, 30% token optimization
- Infrastructure: Tauri 2.9 (294K Rust + 171K TypeScript), SQLite, WebSocket, CI/CD multi-platform builds

Strategic Value to Anthropic

- Cross-Platform Expansion: Windows and Linux represent ~70% of the desktop market. This codebase provides working, tested cross-platform support—months of development Anthropic can skip.
- Advanced Agent Capabilities: Multi-agent swarm coordination, outcome-driven learning, 85% conceptual similarity to Cowork with additional features like learning system and knowledge base.
- Computer Use Technology: Full desktop automation with Windows UIA and macOS Accessibility API integrations.
- Architectural Insights: 14 months of learnings about agent safety, UX trust patterns, multi-LLM orchestration.

Proposed Transaction

What Anthropic Receives:

- Complete Codebase: All source code (294K Rust, 171K TypeScript, Next.js), full git history, CI/CD, test suites
- Intellectual Property: All patents, trademarks, trade secrets, architecture designs, proprietary algorithms
- Integration Consulting: Dedicated support during transfer, architecture walkthroughs, knowledge transfer sessions
- Documentation: Full technical comparison with Cowork, architecture diagrams, API documentation

Engagement Structure:

- Phase 1 - Due Diligence (1-2 weeks): Code review, architecture deep-dive, technical Q&A, security assessment
- Phase 2 - Transaction (Upon agreement): IP transfer, codebase handover, infrastructure access
- Phase 3 - Integration Consulting (3-6 months): Engineer onboarding, integration support, cross-platform deployment advisory. Option to join Anthropic full-time as Desktop Engineer.

About Me

Siddhartha Nagula — Founder & CEO, AGI Automation LLC

- Education: MS Computer Science, University of Texas at Arlington (2025)
- Certifications: Google Cloud Associate Engineer, NVIDIA LLM Applications (RAG, LangChain)
- Track Record: Built AGI Workforce solo (14 months, 465K+ lines); Co-founded \$1M+ revenue infrastructure company
- Expertise: Rust, TypeScript, LLM integration, agent orchestration, cross-platform desktop development

Next Steps

I welcome a conversation to explore this opportunity:

- 1. Introductory Call — Discuss strategic fit and mutual interests**
- 2. Technical Review — Code walkthrough and architecture deep-dive (under NDA)**
- 3. Terms Discussion — Align on transaction structure and consulting/employment engagement**

Siddhartha Nagula
